

Timed Alerts When and Where You Need Them

PDC Alert Timer

We rely on alerts and reminders to ensure the most important work gets done on time. Relying on pen and paper or static information can lead to failures in work process, safety or reliability, but constant buzzing, flashing and ringing can be too distracting from the work that is top of mind. **The PDC Alert Timer offers a visual cue that reminds your team when a process or step is coming due.** The blinks and severity of color become more distinct the closer you get to end of the timing increment so you can focus on the most meaningful work.

It's all in the blinking LED lights that change color to indicate how much time remains before action is required. After completion, the timer can be easily reset for the next reminder or alert. With this timer you also get:

- **Impactful, colorful, and meaningful reminders** that relieve indifference and unnecessary distractions
- **Varied timing options** for job or process-specific time reminders in 12 hr, 72 hr, 96 hr and 7 day increments
- **Performance in harsh conditions** – IP65 rated for withstanding water, dust and extreme temperatures with millisecond accuracy
