

TenderCare® Infant Tether

Identify delicate
NICU patients
without disturbing
or unswaddling to
help promote healthy
development

So tiny, so fragile. NICU patients require special care to minimize disruptions to their growth and development. Protocol requires scanning patient ID to administer breast milk, IV fluids, or medication. Typically caregivers must unswaddle/disturb the newborns to access the ID wristband or tag.

Caregivers can now positively identify the tiniest patients while leaving them swaddled, comfortable, and secure. The ultra-soft tether is attached to the newborn's identification wristband to extend the ID tag outside of the swaddle.

A Brady Business  BRADY

TenderCare® Infant Tether

Product Features:

- Simple and convenient method to access identification tag of swaddled newborns
- Ultra-soft and durable material for delicate newborn skin
- Easy application plus a tamper evident closure for patient safety
- Compatibility with any wristband and ID tag combination
- User-friendly packaging with pre-separated, individual tethers
- Compliance with The Joint Commission Patient Safety Goals for improving the accuracy of patient identification and improving the effectiveness of communication among caregivers
- Antimicrobial additive protects wristband surface against tested non-pathogenic bacteria*

*PDC Healthcare's thermal tether and wristbands eliminate more than 99% of non-pathogenic bacteria within 24 hours, based on independent laboratory testing.

Description	Design	Part Number
Ducks		7780-82-PDG
White/Plain	No Design	7780-11-PDG

Ordering Information:

- Packaged 100 per box, pre-separated
- Dimensions: 12.5" L x .45" W
