

Renovo® Pharmacy Labels

Easily Reissue Unused IV Bags & Syringes

Renovo® direct thermal pharmacy labels feature a specially-formulated adhesive that allows the label to be easily and cleanly removed when an IV bag or syringe needs to be reissued. The alcohol-resistant label remains firmly adhered to the IV bag or syringe through temperature changes during prep.

- **Quickly & Easily Reissue IV Bags and Syringes**
The labels easily remove in a single piece, leaving no residue behind, allowing pharmacy techs to efficiently reissue medication
- **Easy Scanning & Accurate Medication Administration**
The crisp direct thermal printing means barcodes and patient info won't fade or smudge
- **Reduce Workarounds and Relabeling**
With an alcohol-resistant adhesive, the labels adhere firmly to the bag or syringe, even through temperature changes
- **Helps Protect Patient Information**
Because the labels containing patient information are easily removed, it is easier to dispose of them in a manner that is HIPAA compliant

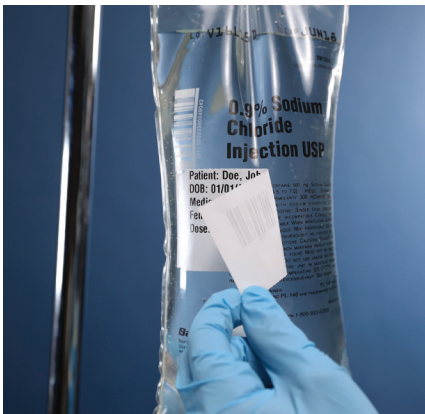

Medication Administration Made Easy

1. Print patient info & apply to medication unit

2. Scan barcode when administered to patient or returned to pharmacy

3. Remove label for HIPAA compliance. If unused, return medication to stock
